EDUCATION

EPFL MSc in Computer Science (specialization in AI & Data Science)	Sept 2025 - Present
The University of Edinburgh, UK Exchange Program	2024 - 2025
EPFL BSc in Computer Science & Communication Systems	2022 - 2025

WORK EXPERIENCE

JPMorgan Chase Software Engineer Intern	Glasgow Technology Centre, UK June 2026 - Aug 2026
- Designed and deployed a multi-agent LLM system for Liquidity Risk Infrastructure: a delegating agent orchestrates sub-agents that call internal enterprise tools via MCP (Model Context Protocol) servers to carry out multistep scenario-analysis tasks, letting business users ask questions in natural language and receive automated variance reports. - Built the natural-language understanding layer on Amazon Bedrock, resolving ambiguous business queries and mapping them reliably to structured internal actions, with a focus on correctness and reproducibility of outputs. - Developed domain-specific agent skills for two production use cases (Sources & Uses and International Reporting). - Automated an end-to-end workflow, from Apache Airflow-orchestrated data pipelines to report generation, cutting manual processing time by 60%; worked in an Agile team with Git, JIRA, and code reviews.	
MATISA S.A. ERP Data Analyst Intern	Crissier, Switzerland July 2025 - Sept 2025
- Validated and reconciled data across ERP modules (sales, purchasing, production), cleaning and structuring large-scale datasets to improve data consistency and reporting accuracy. - Automated client data-renewal outreach with Excel VBA macros that triggered email requests to update records.	
EPFL Teaching Assistant & Student Mentor	Since Feb 2023
Numerical Analysis, Calculus & Physics; mentored 15+ students weekly.	

PROJECTS

ECoG Foundation Model - Campus Biotech, EPFL Sept 2026 - Present (Python, PyTorch, Self-Supervised Learning):
Training a self-supervised foundation model for heterogeneous electrocorticography (ECoG) signals, building on LUNA's topology-agnostic latent cross-attention architecture and LaBraM's vector-quantization tokenizer to learn transferable representations across public ECoG datasets.
Large-Scale NLP Model Benchmarking - Tweet Sentiment Classification (Python, Pandas, NumPy, NLP, Deep Learning):
Built and benchmarked NLP models ranging from classical ML (Logistic Regression, SGD) to Transformer-based models (BERT, RoBERTa) on a 2.5M-tweet dataset, comparing predictive performance across approaches and developing a systematic preprocessing and evaluation pipeline; achieved 90.2% accuracy.
Heart Disease Prediction from Scratch (Python, Linear Algebra, Custom ML):
Implemented a machine learning classifier from scratch without ML libraries, designing custom training pipelines and evaluating on a 300K-sample dataset.
Deep Learning for Fashion Classification (Python, TensorFlow, CNNs, Transformers):
Built a multi-model image classification pipeline using CNNs, Transformers, and MLPs, with PCA-based optimization for improved efficiency.

EXTRACURRICULAR

WAVE Fellowship 2026 - Microsoft & Swissquote The Circle, Zurich Aug - Sept 2026:
Designed and pitched an AI product strategy tackling the drop-off of women moving from university into tech careers, integrating Microsoft Copilot, LinkedIn, and Teams; built a working prototype with Lovable.
Artefact x Groupe Mutuel - Women in AI Hackathon Winner April 2026:
Built an agentic AI system for automated healthcare invoice validation and fraud detection, with an LLM-based workflow for structured decision support.
Dare - Trading Insight Week London, UK Feb 2025:
Selected as one of 30 participants from nearly 1,000 applicants; shadowed traders across the fuel, middle distillates, and LNG desks, generated a positive PnL in pit trading simulations, and presented an independent study on the OTC trade lifecycle to senior traders.
EPFelles - Vice President Lausanne, Switzerland Feb 2023 - July 2024:
Led 10+ STEM gender equality events per year and secured partnerships with major sponsors: Deloitte, UBS, BCG.

LANGUAGES, TOOLS & CERTIFICATIONS

Languages: English (Advanced) French (Bilingual) Arabic (Native) Spanish (Intermediate)
Generative AI: LLMs, AI Agents, RAG, MCP, Prompt Engineering, Amazon Bedrock
Machine Learning & NLP: PyTorch, TensorFlow, Scikit-learn, XGBoost, Hugging Face, NLP, Transformers
Programming & Data: Python, SQL, Java, Scala, Pandas, NumPy, PySpark, ETL Pipelines
Engineering: FastAPI, REST APIs, AWS, Docker, Git, Linux, JIRA, Microsoft Office Suite
Certifications: AWS Certified Cloud Practitioner Hugging Face - Fundamentals of Agents
